KoverTek

DON'T LET THE COLD SLOW YOU DOWN

WINTER WARMERS

Keep your drums and IBCs at working temperature all winter.
Available now from KoverTek.

Cold material is slow, thick and hard to work with.

Resins, gelcoats and adhesives thicken as temperatures fall, making them harder to pour, mix, pump and spray, and most are best used at around 18-25°C. A KoverTek winter warmer wraps your container in controlled, insulated heat so material is ready to use when you are.

200 LITRE DRUM HEATER

- Insulated jacket **with insulated lid** to keep heat in
- Digital temperature controller
- Quick-fit adjustable straps and buckles
- Hot surface warning label fitted
